Atlanta, GA | 904-352-3005 | sukh93@yahoo.com | linkedin.com/in/sukhmanibains

Director-Level Business Intelligence & Data Strategy Leader

Enterprise analytics leader with 12+ years of experience building scalable BI as well as AI platforms and leading high-performing analytics teams. Proven track record delivering enterprise reporting ecosystems, modern data architectures, and executive dashboards supporting financial, operational, and revenue decision-making. Experienced in partnering with C-suite leaders to transform complex data environments into actionable business intelligence. Built and scaled enterprise revenue intelligence platforms supporting \$15B+ in pipeline and executive decision-making across global SaaS operations.

Core Leadership Capabilities

- Business Intelligence Strategy
- Enterprise Analytics Platforms
- Executive & Board Reporting
- Revenue Intelligence & Financial Analytics
- Power BI & Microsoft Fabric
- Data Architecture & Governance
- Salesforce & Anaplan Enterprise Systems Integration
- Cross-Functional Leadership
- Team Development & Mentorship

Professional Experience

Aptean

Senior Manager – Revenue Intelligence & Insights

Alpharetta, GA | Aug 2025 – Feb 2026

Revenue Intelligence Leadership

- Lead a 5-person Revenue Intelligence & Insights team embedded within Sales Operations, supporting global revenue reporting and analytics
- Serve as the strategic analytics partner to RevOps, Finance, Marketing, and executive leadership across pipeline, bookings, and revenue performance
- Own the enterprise revenue reporting ecosystem supporting board, COO, CMO, and CEO decision-making

Enterprise Revenue Data Architecture

- Architected a Microsoft Fabric medallion data architecture (Bronze to Silver to Gold), integrating Salesforce, bookings, pipeline, ARR, and marketing data into a governed revenue Lakehouse
- Designed scalable Lakehouses, semantic models, and data pipelines enabling standardized revenue KPIs and enterprise analytics. This enabled 20% improvement in forecast accuracy

Executive & Board Reporting

- Built executive Power BI dashboards consolidating AOP, quotas, bookings, pipeline, and ARR performance into a unified enterprise reporting environment
- Improved forecasting transparency across regions and product lines while reducing reporting cycle times

Enterprise Funnel & Market Intelligence

- Developed analytics spanning the full commercial lifecycle from TAM / SAM / SOM market sizing through MQL, SQL, pipeline, and closed-won revenue

- Delivered board-ready growth analytics connecting marketing investment and sales performance to revenue outcomes

Salesforce Revenue Systems Integration

- Led integration of Salesforce opportunity, account, and activity data into the Fabric architecture
- Standardized revenue reporting logic, including closed-won treatment, order segmentation, and renewal classification

Mill Creek Residential

BI Architect

Atlanta, GA | Jan 2025 – Aug 2025

Enterprise Financial Data Architecture & BI Platform Strategy

- Led a large-scale Vena data archiving initiative, removing 1.5 billion legacy records, reducing model refresh times from 11 hours to 2 hours, which in turn led to a significant acceleration in the financial close cycle
- Directed management of the REFINE (Real Estate Finance Excellence) initiative, aligning pro forma deal models with live financial reporting for corporate real estate finance
- Implemented Kanban boards and Weekly Status Reports (WSRs), providing real-time visibility into project deliverables and financial reporting initiatives for executive stakeholders
- Partnered with finance, FP&A, and investment teams to integrate deal modeling workflows into centralized reporting structures, improving financial governance and data accuracy
- Designed a cloud-native financial data modernization roadmap using lakehouse principles, mapping Vena, pro forma, live financial reporting, and FP&A data flows into Bronze, Silver, and Gold architecture patterns to improve scalability, governance, and AI/ML readiness
- Designed Power BI reporting architecture integrating with Microsoft Fabric and OneLake to centralize pro forma and live financial datasets and support predictive analytics for CFO-level reporting
- Supported long-term financial data platform strategy by modernizing legacy reporting processes, improving data quality, reducing refresh bottlenecks, and creating reusable architecture patterns for future analytics and AI-enabled use cases

FORTNA

Director of Business Intelligence

Atlanta, GA | Nov 2023 – Oct 2024

Enterprise Business Intelligence Leadership

- Led the enterprise Business Intelligence function supporting financial reporting, operational analytics, and executive decision-making across global operations
- Directed cross-functional analytics initiatives connecting Finance, Operations, and executive leadership through centralized reporting and data governance
- Established a global Business Intelligence support function for Power BI and Tableau reporting using Kanban methodology, achieving a 90% ticket resolution rate within a two-week SLA
- Maintained 100% retention across the Business Intelligence team during a period of rapid platform modernization and analytics expansion

Enterprise Financial Data Transformation

- Directed the AR/AP financial consolidation initiative, integrating five ERP systems using Vena, cutting reporting times in half, and enabling faster executive decision-making
- Improved financial visibility enabled early loan repayment, saving the company approximately \$40 million in interest expenses

- Integrated Anaplan planning and forecast data into enterprise BI reporting models, connecting FP&A planning outputs with ERP and operational data to improve executive visibility into budget, forecast, actuals, and variance performance
- Led implementation of Planful to centralize financial consolidation, planning, and budgeting processes, reducing financial close cycles from 15 days to 5 days
- Architected enterprise Power BI dashboards layered over Fabric-based data architecture, enabling real-time operational and financial analytics across global ERP systems
- Implemented master data management (MDM) capabilities using BOOMI in alignment with Deloitte's strategic recommendations to improve enterprise data accuracy and reporting consistency

FORTNA

Manager of Business Intelligence & Data

Jacksonville, FL | Jul 2022 – Oct 2023

Business Intelligence Team Leadership

- Led strategy and operations for the Business Intelligence team responsible for enterprise reporting, analytics, and data-driven decision support across the organization
- Trained and mentored a 6-person cross-functional BI team, including analysts and interns, building technical capability and establishing a culture of continuous improvement

Enterprise Reporting & Analytics Platform Development

- Executed the enterprise Power BI and Tableau reporting strategy, automating more than 60 reports and integrating data from project management, ERP, and financial systems
- Established a Business Intelligence server environment with replication of Microsoft Dynamics AX to enable near real-time financial reporting and improved Salesforce reporting capabilities
- Implemented Power Automate workflows and reporting automation solutions that reduced manual reporting effort and improved operational efficiency across business teams

Financial Data & Post-Merger Reporting

- Led documentation and reporting initiatives supporting a \$3 billion post-merger financial consolidation, ensuring consistent financial visibility across leadership and operations

FORTNA

Enterprise Data Architect

Jacksonville, FL | Jan 2021 – Jul 2022

Enterprise Data Architecture

- Architected the enterprise Business Intelligence data platform supporting Power BI and Tableau analytics across operations, finance, and project delivery teams
- Designed scalable data models and reporting pipelines enabling consistent enterprise KPI definitions and improved reporting performance

Enterprise Data Integration & Data Warehousing

- Developed SQL-based ETL pipelines integrating ERP, CRM, and operational datasets into centralized reporting structures supporting executive analytics
- Supported enterprise reporting around Anaplan planning and forecast data, helping Finance and FP&A connect planning outputs with ERP and operational reporting for improved budget, forecast, and variance visibility.
- Designed data warehouse schemas enabling enterprise reporting across project financials, operational performance, and customer delivery metrics

Analytics Platform Enablement

- Implemented Power BI semantic models and reporting frameworks, improving enterprise reporting consistency and enabling self-service analytics across business teams

- Partnered with business leaders to translate operational reporting needs into scalable enterprise BI solutions

Florida Blue

Senior Business Intelligence Developer V

Jacksonville, FL | Dec 2018 – Oct 2019

- Led enterprise reporting delivery for Enrollment and Billing, mentoring junior developers, and supporting director-level stakeholders
- Developed Power BI, Tableau, and SSRS reporting solutions, including the implementation of a scalable, standalone reporting environment
- Partnered with business leaders to define reporting requirements and improve operational decision-making through data insights
- Architected integrated data solutions across Snowflake, DB2, Oracle, and SQL Server to support large-scale analytics

Kforce

Senior Business Intelligence Developer

Tampa, FL | Jul 2018 – Dec 2018

- Drove reporting strategy and automation initiatives in partnership with senior leadership, improving visibility into business performance
- Led Azure transition efforts, designing scalable data models and automating 30+ recurring enterprise reports
- Delivered Power BI dashboards for executive and operational teams, enhancing workforce and financial insights
- Managed end-to-end BI delivery, including SSIS pipelines, data modeling, and reporting lifecycle management

Jackson Hewitt

Senior Application Developer – Business Intelligence

Sarasota, FL | Feb 2018 – Jul 2018

- Led Power BI proof-of-concept initiatives to assess reporting architecture, data accessibility, and platform scalability
- Supported Azure data strategy and migration efforts, including SQL Azure and Data Factory implementations
- Standardized and optimized SSRS reporting, improving performance and usability across business teams
- Built SQL-driven data models and dashboards across Power BI, SSRS, and Qlik to support operational analytics

ACTS

Business Intelligence Developer

Jacksonville, FL | Oct 2017 – Feb 2018

- Delivered client-facing BI solutions, translating business requirements into scalable Power BI dashboards and data models
- Built end-to-end sales and performance dashboards for financial services clients, improving visibility into key metrics
- Partnered with sales and account teams to demonstrate BI capabilities and support solution adoption
- Led offshore data preparation efforts and implemented row-level security frameworks for enterprise reporting

Credit Union One

Business Intelligence Developer / Data Architect

Ferndale, MI | Nov 2016 – Oct 2017

- Developed enterprise reporting solutions and data marts to support executive-level financial and operational decision-making
- Automated month-end reporting processes and improved efficiency of SQL-based data pipelines
- Enhanced SharePoint reporting environments, improving accessibility and adoption of BI tools across the organization
- Partnered with leadership to define BI strategy and implement scalable data architecture improvements

Exsilio Solutions

Developer Consultant

Redmond, WA | Jan 2016 – Nov 2016

- Delivered BI solutions for enterprise clients, translating complex requirements into actionable reporting and dashboards
- Collaborated with offshore teams to optimize SQL Server reporting performance and stored procedures
- Managed multiple BI initiatives involving SSIS, SSAS, and data modeling in fast-paced consulting environments

City of Jacksonville

Business Intelligence – Data Specialist

Jacksonville, FL | Mar 2014 – Jan 2016

- Managed data warehouse operations, improving SSIS and SSAS processes and enabling scalable reporting infrastructure
- Developed dashboards and reports for city leadership, supporting strategic planning and operational decision-making
- Identified cost-saving opportunities through data analysis and process improvements across city operations

Technical Skills

Data & BI Platforms: Power BI, Fabric, Tableau, Qlik

Data Engineering: SQL Server, T-SQL, SSIS, ADF, Snowflake

Systems: Salesforce, Clari, Planful, Vena, Boomi

Capabilities: Data Modeling, ETL/ELT, Forecasting, KPI Design, Revenue Analytics

AI & Data Innovation: LLM Applications, AI-Assisted Analytics, Prompt Engineering, LangChain (Foundational), Agentic Workflows, MCP Server Concepts

Education

Bachelor of Science – Computer and Information Science

University of North Florida
